

AI Adoption Readiness Audit

5 Dimensions to Assess Before Your Next AI Initiative

Elliot Betancourt

79% of enterprises say AI adoption isn't working. BCG found that 70% of successful AI ROI comes from people and process — not technology. Score each dimension to find out if you're ready for a pilot or a strategy session.

1 Strategy Clarity

- Specific use cases with success metrics
- General direction, no measurable goals
- No formal AI strategy exists

Why it matters: 75% of executives admit their AI strategy is 'for show.'

2 Data Readiness

- Governed, accessible, documented
- Exists but siloed or inconsistent
- Scattered, ungoverned, or unknown

Why it matters: 74% of companies can't scale AI value due to data issues.

3 Process Design

- Mapped workflows with named owners
- Some processes identified, no owners
- AI layered on top, nothing redesigned

Why it matters: AI augments workflows. It doesn't replace the need to design them.

4 People Readiness

- Training plan, change management in place
- Some skilled staff, no formal plan
- No training, resistance from teams

Why it matters: 54% of C-suite say AI is 'tearing their company apart.'

5 Measurement Plan

- KPIs defined, baseline measured
- General goals, no baseline
- No success criteria defined

Why it matters: 42% of companies abandoned AI projects because they couldn't prove ROI.

SCORING GUIDE

5 Green:

Ready to pilot. Execute with confidence.

3+ Green:

Close. Fix the gaps before scaling.

Any Red:

Not ready. Start with a strategy session.

3+ Red:

Stop. Regroup before spending another dollar.

The best time to run this audit is before you write a single line of AI code.
